

Establishment of haemophilia as a clinical entity (Patek and Taylor, 1937)

HIV/HCV infection from plasma derived products (Since 1980)

Heat treatment of plasma derived coagulant factors (Since 1985)

Plasma derived factors in treatment of haemophilia (1979)

Cryoprecipitate (1965)

Recombinant coagulant factors (Since 1990)

1920

1940

1960

1980

2000

Discovery of DNA (Watson and Crick, 1953)

Recombinant insulin (1982)

Recombinant tissue-type plasminogen activator (1987)

The first recombinant vaccine (1986)

Recombinant somatostatin (1976)

Recombinant erythropoietin (1986)
